

COMPOSITE DECKING BOARD

DECKING DONE RIGHT

Our Decking is a wood polymer composite decking system that is made from recycled materials and manufactured in the UK.

It is a sustainable, low maintenance alternative to timber and is used in a wide range of construction applications.

The boards are also fully recyclable, and 100% of any material that is returned to us, or products that are rejected under our quality control system, are recycled back into production.

Pedec Decking is created from wood polymer composite (WPC) made from a blend of sustainably sourced hardwood flour and HDPE polymer. The material composition is approximately 55% hardwood fibres and 45% high-density polyethylene from recycled plastic milk bottles (HDPE).

COMPOSITE DECKING BOARD

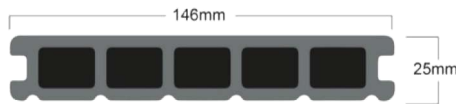

Available in a wide range of colours to suit various applications.

Rubbertech Deck boards are solid in cross-section and do not have the weaker, open core structure associated with many poorer quality products.

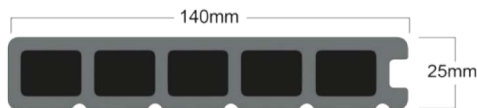

We are so sure of our decking quality that we back it with a 10 year warranty against structural failure.
